COMPANY PROFILE

JANTSA is one of the largest European manufacturers of wheels for commercial, agricultural, industrial and military applications.

The company stands for:

- The broadest range in the industry
- 40+ years expertise in wheel manufacturing
- OEM supplier quality
- Global presence in more than 85 countries and 6 continents.

With annual production capacity of **2 million wheels per year** and over **1,000 Employees** we are ranked as one of the fastest growing wheel manufacturers.

The mission of JANTSA has always been to satisfy the expectations and requirements of our customers from all over the world in terms of quality, variety, service, and price.

MAIN FACTS

NAME	JANTSA JANT SANAYI ve TICARET A.S.
PROPERTY TYPE	Joint Stock Company (Listed at BIST)
WEB	www.jantsa.com
LOCATION	Umurlu Mah. Organize Sanayi Bölgesi Cad. No: 58-59/1, 09630 Efeler/Aydın/Turkey
YEAR OF ESTABLISHMENT	1977
HEADCOUNT	1029 Employees
MANUFACTURING AREA	100.000 m ² in Umurlu/AYDIN
MANUFACTURING FACILITIES	<ul style="list-style-type: none">• JANTSA 1 Main plant & headquarters - Aydın/Turkey• JANTSA 2 Production of lock and side rings - Aydın/Turkey
PRODUCTION CAPACITY	2 million wheels annually
EXPORT MARKETS	More than 85 countries
SHARE OF EXPORT	75% of the revenue
TECHNICAL COOPERATION	LBF (Fraunhofer institute), Dokuz Eylül University, BV (Bureau Veritas), TUV, TUBITAK and DLG
PRODUCT VARIETY	<ul style="list-style-type: none">• 300 wheel sizes• 7000 wheel models
PRODUCT RANGE	<ul style="list-style-type: none">• Commercial Wheels (Trucks, Buses, Trailers)• Agricultural and Multi-Purpose Wheels (Tractors, Implements, Trailers, Forestry, Harvesters, Sprayers&Row-Crop)• Industrial Wheels (Construction, Material Handling, Earthmoving, Mining)• Military Wheels• Sprayers & Row-Crop

YOUR BENEFITS

QUALITY

We deliver products offering the utmost performance and reliability in the wheel manufacturing industry. Our technological leadership is assured by combining 40+ years of wheel expertise with the cutting-edge engineering know-how.

RANGE

With 300 wheel sizes JANTSA has the broadest product range in wheel manufacturing industry worldwide. Balanced on-road and off-road customer portfolio assures our financial sustainability and access to the latest technologies in both segments.

FLEXIBILITY

Speed and time-to-market are the cornerstones of JANTSA's global success. Our everyday work is defined by accelerated new product development and delivery flexibility.

GLOBAL PRESENCE

We are present in 85 countries and 6 continents. JANTSA constantly enlarges its global footprint, while reinforcing local service.

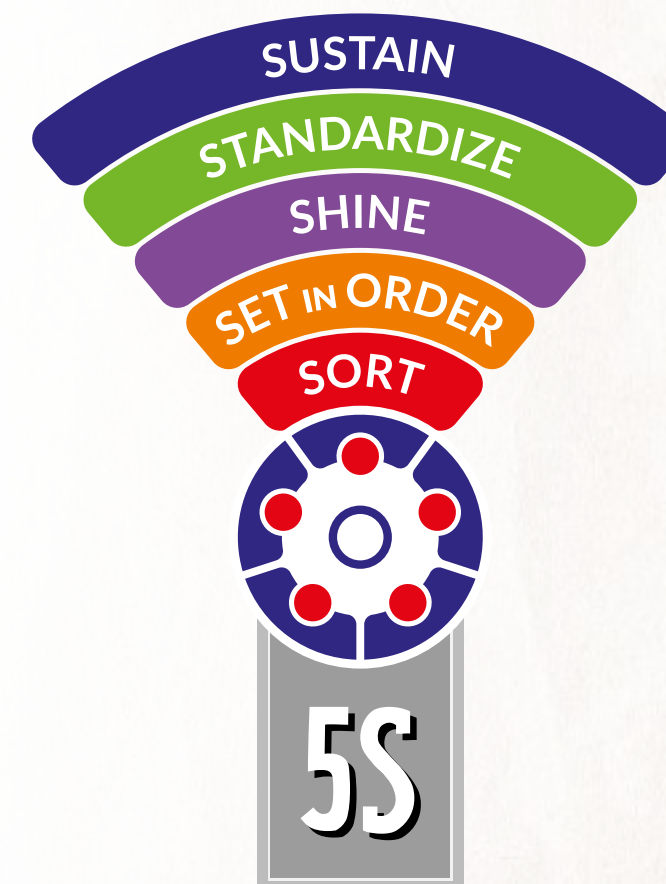

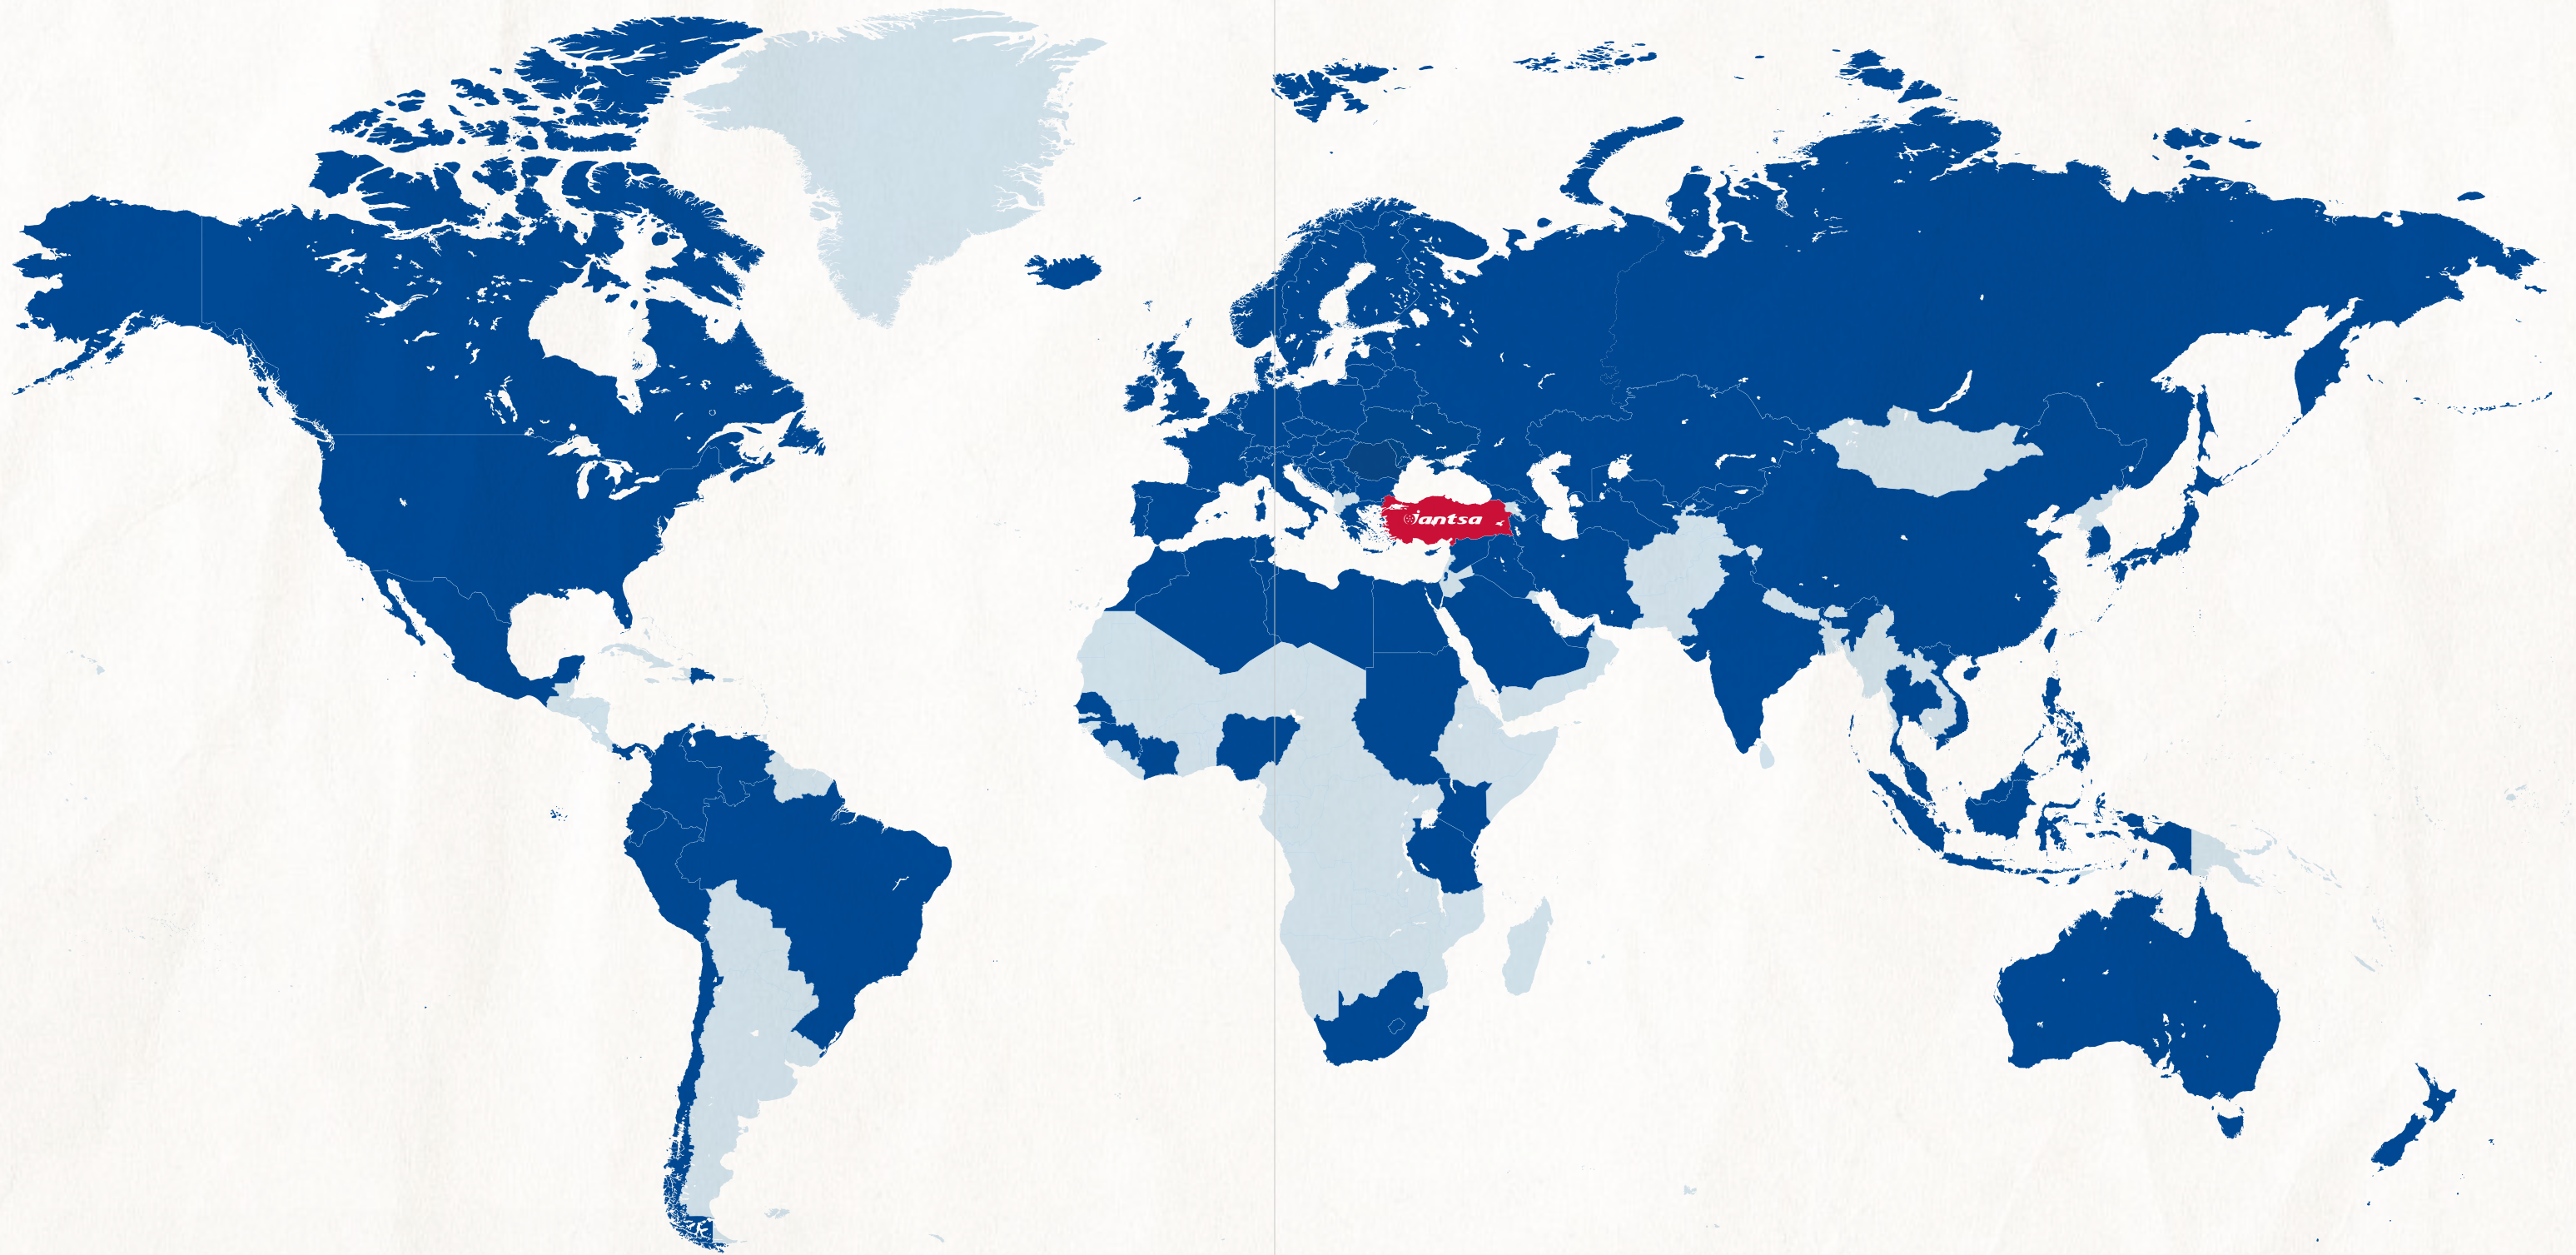

COMPLETE SOLUTIONS

We assure superior customer value through logistic & after-sales service, complete wheel-tire solutions, and in-house tooling.

V-TRAC MULTI-PIECE VARIOUS TRACK WHEELS

JANTSA presents a new range of narrow adjustable wheels for tractors and agricultural machinery.

Thanks to the 3-piece design these wheels can be easily applied for different machines with various hub and track requirements. Adjustable Disc plate and interchangeable Adaptor Flange assure robust solution for versatile agricultural applications.

- From 32" to 54" diameters
- User-friendly design and mounting
- 16 to 32 track options
- E-coating and more than 200 different top coat options
- Interchangeable adaptor flange with different PCD options
- Continuously welded ring for solid disc-rim connection

CROWN-TRAC

JANTSA is one of the few worldwide manufacturers capable to produce crown wheels with 8 different track options which is the most modern. This is the most design of adjustable wheels preferred by major tractor manufacturers.

CROWN-TRAC EXPLODED

CONVENIENCE

8 standard wheel offset positions, easy and quick track changing guaranteed.

HIGHER SPEED

Designed for high horse power tractors operating at speed up to 65 km/h.

VARIETY

As of today we are capable to produce 22 wheel sizes in Crown-Trac design. More sizes are coming within the next months!

HIGHER LOAD CAPACITY

The disc is connected to the rim with a continuous welded crown ring which assures higher load capacity compared to standart adjustable wheels.

CROWN-TRAC WITH COLOR

Crown-Trac wheels in 24", 30",34" and 42" will be available shortly

As one of the fastest growing companies in the industry, JANTSA ,s committed to continuous improvement and innovation. Our creavity and entrepreneurial spirid are the basis for best-selling products which exceeds the industry requirements. Look out for more product introductions coming from JANTSA soon!

MAIN DEFINITIONS

The terms "Rim", "Disc" and "Wheel" are often confused in daily life. In order to save time and omit any mistakes, it is important to understand the difference between these definitions.

Wheel is a rotating component of the vehicle, which carries load of the car and passes the torque. The wheel is located between tire and hub. Most of the wheels manufactured by JANTSA are **Disc Wheels**, which consist of rim and disc assembled together. JANTSA is also manufacturing **Demountable Rims** (discless wheels / spoke wheels) with adapter ring, spokes, and clamps serving as a connection part of rim to the hub.

Disc serves as a connection part between wheel and hub (break drum/disc brake) of the vehicle and is either welded or connected with bolts to the rim.

Rim is a part of the wheel which serves as seat for the tire. According to standard JANTSA practice, all rim sizes are given in inches, which define **width** and **diameter** of the rim.

Rims, manufactured by JANTSA can be classified according to the **flange design** and angle of the tire bead seat. In terms of the flange design one can distinguish between two groups of rims: multi-piece and single-piece rims.

- **Single-piece** rims have one-piece rim design, with both flanges being integral parts of the rim.
- **Multi-piece** rims consist of rim itself and rings, which serve as demountable flange (s).

The type of rim can be easily identified in JANTSA catalogue by sign between measuring dimensions in inches:

- "x" – for single-piece rims (22.5x11.75, 9.00x15.3 etc.)
- "-" – for multi-piece rims (8.5-20; 17.00-25/1.7 etc.)

RIM PROFILES

JANTSA rim profiles can be classified into two groups:

- 15° bead seat angle rims for tubeless tires
- 5° bead seat angle rims for tubeless and tube-type tires

These rim profiles can be easily identified by the rim diameter:

- 15° - rims with diameter ending with 0,5" (15.5", 17.5", 22.5", 26.5", etc.)
- 5° - rims with all remaining diameters (15.3", 20", 24", 34", etc.)

The rim profiles, manufactured by JANTSA can be further classified in line with the scheme below.

RIM PROFILES PER BEAD SEAT ANGLE

15° BEAD SEAT ANGLE

- Drop centre, symmetric
- Drop centre, asymmetric

5° BEAD SEAT ANGLE

- W-Profile (single well)
- DW-Profile (double well)
- DWW-Profile (double well wide base)
- TW-Profile (triple well)
- MW-Profile
- Drop centre
- Multi-piece tapered bead seat
- Multi-piece flat base
- Multi-piece semi drop centre

WHEEL SPECIFICATIONS

AA-SECTION

- | | |
|-------------------------------|---------------------------------|
| 1 Width of rim | 4 Thickness of disc material |
| 2 Diameter of rim | 5 Center hole diameter |
| 3 Thickness of rim material | 6 PCD (Pitch Circle Diameter) |

The secure fastening of wheel and effective load transmission is determined by exact matching of wheel and vehicle parts (axle hub and brake). Therefore, it is important to understand the key geometrical specifications of the wheel disc.

FRONT VIEW

WHEEL CENTERING

The common types of mounting systems are Stud centered, Hub centered, and Double centered.

Stud centered system uses the studs on the wheel hub to guide and center the wheel. Chamfered stud holes identify a stud centered wheel. These wheels are designed to be centered by conical or spherical nuts on the studs.

Hub centered systems use the actual wheel hub to guide and center the wheel. Hub centered wheels generally have straight bolt holes with no ball seat for nuts with flat washer (flange nuts). These wheels require narrow tolerance of center hole dimensions.

Double centered mounting systems use both wheel hub and studs to center the wheel. These wheels have bolt holes with countersinks together with center hole with a narrow tolerance. They mostly use spherical or conical nuts, but flange nuts like for hub-centered wheels can be also used.

It is imperative to use right components for each type of mounting and to fit wheels to the proper hubs. Mixing components of different mounting systems can lead to breaking of studs, decrease of torque, cracks on wheels and eventually wheel slippage.

STUD CENTERED WHEEL

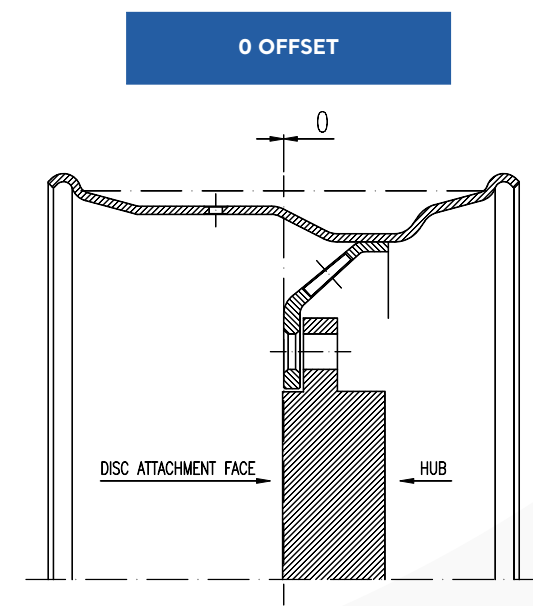

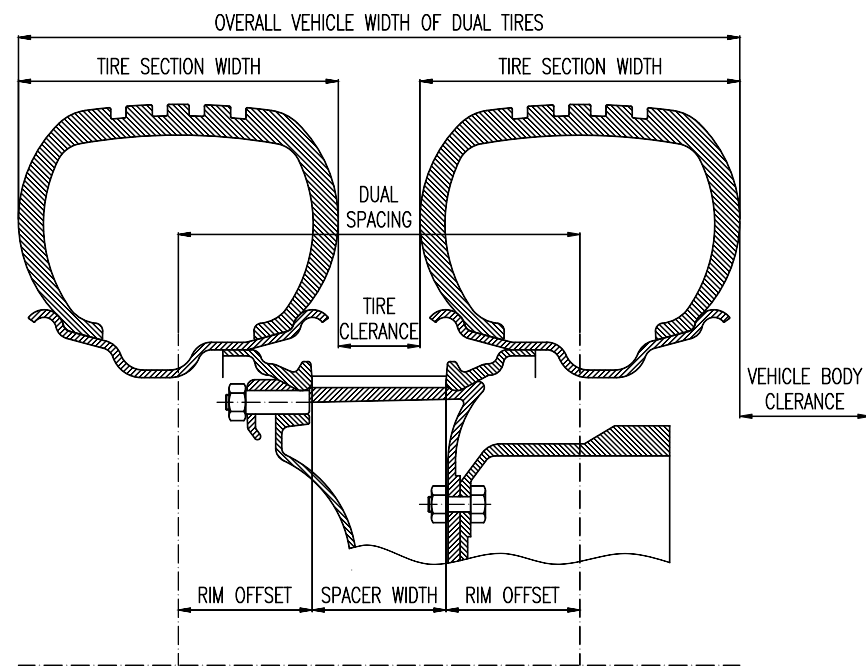

HUB CENTERED WHEEL

- 1 | Hub 2 | Drum 3 | Disc 4 | Nut 5 | Bolt

OFFSET

One of the crucial dimensions of the disc wheel is Offset. As per **JANTSA** classification offset is a dimension from imaginary rim center line to outer disc surface. For dual mounting applications Offset equals to "half dual spacing". Dual spacing is a distance between center lines of two imaginary rims in dual mounting. Values of track width, tire clearance, overall vehicle width of tires, and in some cases overall vehicle width are determined by dual spacing. Therefore, values of minimum dual spacing are regulated by several standards, including **ETRTO** and **TR&A**.

Another measurement, commonly used by many manufacturers is **Offset ET** (from German "Einpresstiefe" or so-called "Inset"), which is a dimension from imaginary rim center line to inner disc attachment surface. Difference between value of Offset and Offset ET equals disc thickness of the wheel.

Disc wheel offset can be positive, negative or so-called "0-offset":

- **Positive Offset:** the disc-hub attachment face is located at the outer side of the rim
- **Negative Offset:** the disc-hub attachment face is located at the inner side of the rim
- **"0-offset":** the disc-hub attachment face is located at the center of the rim

LOAD CAPACITY

In addition to the geometrical construction specifications, each wheel is designed for a specific **load carrying capacity** and corresponding **speed**.

Load capacity or **load rating** is defined as the the maximum load a wheel is permitted to carry at the specific speed and under certain operating conditions. Do not to load and inflate the tyre / wheel / axle system beyond the rating of the lowest rated component. Thus, wheel load and cold inflation pressure imposed on the wheel may not exceed JANTSA's recommendations and the load permitted by the vehicle manufacturer, even though the tyre may be approved for a higher load or inflation pressure. If you do not have information about the tire load capacity and inflation rating, please contact the tire manufacturer or distributor. Similarly, the identified wheel load shall not be exceeded, even if the speed index is decreased.

Speed indicates the maximum speed at which the wheel can carry a load corresponding to its Load Capacity under service conditions specified by the wheel manufacturer.

WARNING

- The wheel may break under excessive load, causing tire failure and sever injuries. Please refer to the Gross Axle Wheel Rating (GAWR), which is provided by the vehicle or machine manufacturer, when in doubt.
- Load carrying capacity and speed, which are provided in this catalogue, indicate only reference values for standard applications. In case of any doubt about the suitability of JANTSA wheels for specific tire or usage, please consult our technical support.

The load capacity and speed of a wheel or tire are expressed by ETRTO indices.

SURFACE TREATMENT

Wheel paint system is essential for the safety and performance of the vehicle. A superior coating not only assures great appearance, but also provides long rust protection against tough environmental and working conditions, which minimizes maintenance costs.

All JANTSA wheels receive a three-layer surface treatment that guarantees superior rust protection and premium look.

- **Zinc Phosphate Pre-Treatment:** Prepares metal for enhanced corrosion resistance and excellent paint adhesion.
- **Epoxy E-coat (cataphoresis):** Assures the best available surface protection, equally distributed on wheel surface. It is especially crucial for hard-to-reach areas, such as wheel sharp corners and edges, where rust tends to appear first (e.g. between disc and rim, holes, and rim flanges). In production, we are available to implement black or grey color options.
- **Wet Topcoat:** Premium paint, which prevents expansion of rust from scratches on the wheel metal. The flexible paint system allows application of virtually any color per customer demand.

JANTSA closely cooperates with the leading paint suppliers, while maintaining its coating know-how in house. Thus, four different top-coat variations (2K-acrylic, alkyd, polyester, 1K-acrylic) were developed exclusively for JANTSA needs. At the same time, two fully automated e-coating workshops with a joint annual capacity of 2 million wheels assure production efficiency with minimum ecological footprint.

Key advantages of JANTSA painting system are:

- **Utmost corrosion resistance** – an extended salt spray test period till 1500 hours and reduced corrosion on wheel corners and edges
- **Cost efficiency** – longer wheel life guarantees minimum maintenance costs
- **Appearance** – premium top coating with more than 200 standard colors available
- **Sustainability** – chemical materials used in surface treatment don't contain any materials which are listed in REACH Regulations.

In sum, JANTSA coating meets the strict requirements of automotive industry for durability and look in the toughest operating environment.

OFF-ROAD SOLUTIONS

There are several specific solutions, which JANTSA offers for the agricultural and industrial sector.

ADJUSTABLE WHEELS

Different agricultural crops require various tracks for the machinery running in the fields. An easy solution to this challenge is provided by wheels with adjustable offset value. Here, the disc is attached to the rim on lugs (ring) and bolts. Such design enables the user to adjust offset by changing the position of the disc.

Depending on the application, there are different types of lugs / rings, with the most standard ones listed below.

KNURLING

Knurling is a pattern of straight lines (grooves) in the rim bead seat area, which prevents tire from slippage. It is typically applied on the bigger wheel sizes, which are exposed to strong traction and therefore require a better contact between rim and the tire.

VALVE PROTECTION AND REINFORCEMENT

Agricultural, forestry, and industrial machines frequently operate in tough conditions, which might expose wheels to impacts and stress. Valve guards are used to secure the valve from damaging for some off-road wheels.

Additionally, rims can be protected from impacts and stress by reinforcing the flange. Such measure is used for the toughest operating conditions.

HUMPS

Hump is an extra bend on the rim profile, which ensures tight fitment of tire bead, while operating at low air pressure.

DISC MARKING

ECO-WHEELS!

We always respect the nature and environment with sustainable development at our facilities.

As JANTSA, we strictly pay attention to environmental aspects in each and every step we take for continuous improvement in our processes. We do not produce wheels only, but also produce our own electricity through our roof-top solar panels which generates 2 million watts electricity per year.

TECHNOLOGICAL

ECO-FRIENDLY

SUSTAINABLE

ATTRACTIVE

SAFETY & MOUNTING RECOMMENDATIONS

It is important to handle wheels with maximum care, and pay special attention to its safe usage, mounting, demounting and service. Users have to follow all conditions and norms according to industry, national and international regulations. As JANTSAs we will try to point out just those which we consider as the most common and important.

Before servicing, disc wheels have to be checked for following **possible damages**:

- Cracks on the disc and/or rim
- Asymmetric shape of disc contact surface
- Deformed (damage, burr, excessive corrosion etc) stud holes
- Deformed (damage, burr, excessive corrosion etc) flanges
- Excessive corrosion
- Excessive wear
- Damaged rings of multi-piece wheels

Using wheels/components under these conditions is strictly forbidden. Damaged parts should be replaced.

While **mounting the wheel on a hub** you have to ensure that all surfaces are clean, free from rust and deposits. Elements of different mounting types should not be confused, since this may result in loss of torque, disc surface cracks, bolts and studs damage, and loss of wheel. Applied torque level should correspond to instructions of vehicle manufacturer. Nuts installation has to be done crosswise, with gradual increase of torque level. Tightening of nuts on the wheel has to be checked 100 km after first installation and regularly during usage.

Examples of nut tightening sequence related to commercial vehicle disc wheels having 6, 8, 10 bolt fixing and to the TRILEX wheel system.

Mounting and Demounting of tire on the wheel has to be done by qualified personnel in well-equipped service points, according to specifications and procedures stipulated by ETRTO, TRA and other industry, national and international regulations. You have to ensure that all surfaces are clean, free from rust and deposits. It is crucial to match properly wheel and tire sizes according to above mentioned standards and recommendations of the vehicle manufacturer. Mismatch can result in serious damages and injuries. Diameter shown on the tire should exactly match the diameter stamped on the rim/wheel. Tires must be completely deflated before demounting wheel, or components of the wheel from the vehicle. Avoid standing in front of multi-piece wheels during assembly: damaged components might spring off.

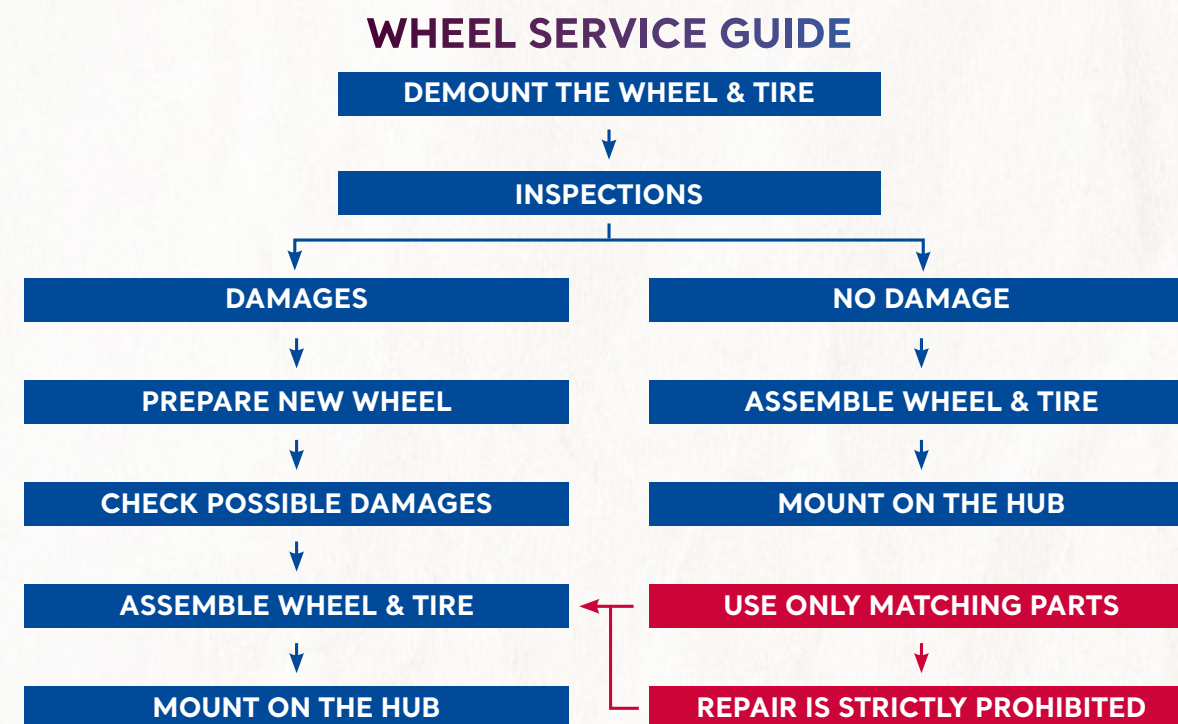

Mixing components of various manufactures may result in fatal injuries, therefore only matching parts of one manufacturer and one wheel system can be assembled.

Repair or of steel wheels is strictly prohibited. Especially dangerous is:

- Welding of rims or wheels
- Repair of damaged stud holes
- Repair of deformed center hole
- Straightening of disc contact surface
- Straightening of rim flanges

JANTSAs does not bear obligation under warranty for goods if they were modified, repaired or processed. This instruction should be used only as a guide and can not be the only source of information of safety information on wheels.

WARRANTY POLICY

1. JANTSA A.S. warranties that delivered goods are free from defects in materials and workmanship and are produced according to provided technical documentation. The warranty period for these defects is 24 months from the passage of risk.
2. The Buyer has to examine delivered goods immediately upon receiving them, and provide written notification of all discovered defects or incomplete delivery no later than within 10 days after receipt of goods. Otherwise delivery of goods and quality of delivered goods are considered as accepted.
3. Normal wear is not covered with warranty. The warranty also does not cover damage resulting from improper usage of products, for example excess of loading norms or inflating tires stipulated by ETRTO (European Tyre and Rim Technical Organization), or using tires which do not correspond to ETRTO standard.
4. JANTSA A.S. does not bear obligation under warranty for goods if they were modified, or processed (including welding of disc to rim, drilling of stud holes, mechanical processing of surface, etc.). Repair of disc wheels is strictly prohibited.
5. JANTSA A.S. does not bear obligation under warranty for goods if spare parts produced by other manufacturers are used with them.
6. The Buyer should bear full responsibility for proving all conditions required to put forward a claim, in particular, proving presence of defect itself, the time at which the defect was discovered, and the fact that notification of defect was sent on time.
7. JANTSA A.S. bears responsibility for defects and damages which appear during transportation in limits of INCOTERMS 2010 delivery terms, according to which the deliveries are performed.
8. JANTSA A.S. warranties, that proved defects will be corrected either through replacement of goods or through compensation of their EXW price at the moment of initial delivery of goods.
